

1. In the project Management User Interface, a Project Manager shall have the ability to initialize a Novena Project. In order to do this, the project manager will need to enter in some of the following information:
 - a. Default workflow:
 - i. Project name,
 - ii. Project participants,
 - iii. Project Description
 - iv. etc...
 - b. Alternate workflow,
 - i. Salesforce project
 - ii. Project participants
2. If a Project Manager decides to import a Salesforce project, the application would extract the necessary information from that salesforce project and would store that information into a database with all of the important information.
3. The Admins shall be able to add roles to the participants.
4. A user that is part of a project shall be able to upload project resources to that project.
